

Answer to the review of Prof. István Pálínkó

Let me express my gratitude to Prof. Pálínkó for being one of the reviewers regarding my thesis.

I render thanks to him for his praising words in connection with the performed experimental work. As Prof. Pálínkó has mentioned, the purpose of the doctoral work is to emphasize problem-solving. I hope I have learnt enough of that. Furthermore, he pointed out failures in grammar and the usage of words, which may look marginal. Although correct interpretation of facts, measurements and ideas is crucial even in case of scientific topics. Nevertheless, it is a kind of thing, that can not be acquired on one's own perfectly. Therefore I am much obliged for the thorough correction of my reviewer.

The report of Prof. Pálínkó is gratefully acknowledged. I wish to deserve his reassuring words in connection with my upcoming work.
