

Response to Referee Evaluation:

Reviewer: Dr. habil. László Horváth

D.Sc., honour prof.

University of Szeged

Department of Optics and Quantum Electronics

ELKH-SZTE Photoacoustic Research Group

I am grateful for the comprehensive review and constructive feedback given by DSc László Horváth on the thesis titled "Effect of Residential Solid Waste Burning on Ambient Air Quality in Central and Eastern Europe". I genuinely value the considerable time and effort he invested in delivering thoughtful feedback.

Question:

Figure 3 shows the amount of the waste burned in households. When the values are added together, the total only amounts to 53%. What accounts for the remaining 47%?

Answer:

Figure 3 is derived from the survey aimed at determining the amount of household waste burned in stoves. According to the survey, 47% of respondents reported using wood or coal in their household stoves.
